

# Best Practices

# Introduction

- ✓ In this session, we'll navigate Telegram, WhatsApp, Google tools, and coding platforms like LeetCode, Codeforces, and HackerRank. Explore our progress sheet, and crucially, discuss and sign A2SV's code of conduct.

Conclusion and Takeaways

# Telegram and WhatsApp

We'll use Telegram and WhatsApp as our professional communication tools currently, uniting our diverse African group through its efficient channels and professional interface.

To access Telegram and WhatsApp, you have three options:

- Download the desktop version (Recommended)
- Get the mobile app
- Use the web version

Find all options here: [Telegram](#), [WhatsApp](#)

# **Telegarm and WhatsApp Demo**

# Google calendar

All our sessions and activities are tracked on Google Calendar, allowing us to efficiently organize and optimize our tasks. Using Google Calendar helps streamline our sessions, ensuring optimal planning and task management.

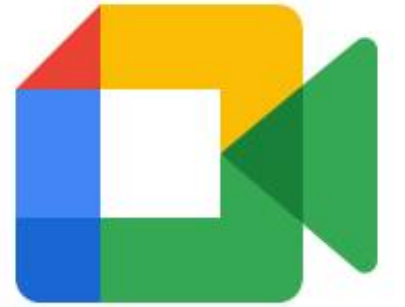

To access Google Calendar, you have two options:

- Use the web version (Recommended for creating events)
- Get the mobile app (comes with most of android phones)

Find all options here: [Google Calendar](#)

# Google Calendar Demo

# Google Meet

We rely on Google Meet for our sessions, making it simple to chat, collaborate, and even break into smaller groups using breakout rooms.

To access Google Meet, you have two options:

- Use the web version (Recommended for sessions)
- Get the mobile app (comes with most of android phones)

Find all options here: [Google Meet](#)

# Exploring the progress sheet

We keep track of our progress using Google Sheets to help us learn better. It's like our progress journal, guiding us to improve and grow along the way.

To access Google sheet, you have two options:

- Use the web version
- Get the mobile app (comes with most of android phones)

Find all options here: [Google sheet](#)

Here is the progress sheet for [G-5F: Progress Sheet](#)

# Coding platforms

We use various coding platforms in the learning process to get problems to solve, learn from them and challenge ourselves. Here are the most common ones.

- [Leetcode](#)
- [Codeforces](#)
- [Hackerrank](#)
